

FAQs	Answers
Is the Steel Australian Made?	Yes. We only source the best Australian made material as it is proven a much better product than imported. All Australian made steel is label and easily identifiable.
How long can I expect a silo to last?	With the correct care a silo should last over 35 Years. One of our first silos is still in great condition and still operating after 35 years.
Do silos have required maintenance?	Yes, Minimal effort is required to make the silos work many years to come. All new silos come with a user manual
When is the likely delivery time?	Delivery is generally 4-6 weeks and can be up to 10 weeks over the harvest period. All deliveries are planned to work in with your schedule.
Can I get something customised?	Yes. 90% of our silos are built with specific customer request. From different heights and outlets to repositioning of Blower pipes etc.
Are quality rubbers/sealants rivets used?	Yes. Our focus is on building the best silos first not the cheapest, We use the strongest industrial adhesives, rubbers and rivets. We have continual ongoing tests to try to find even better products
Does silo meet Australian Standard AS 2628 for sealing?	Yes, All silos are tested at the factory before delivery and don't go out unless they exceed the standard. Regular tests show an average of 20 minutes half-life.
How can I work out what my current storage will hold?	Visit our silo storage calculator to help
